A SMART APP KEEPS COVID-19 AWAY

BY FAE - FAST AND EXCELLENT

Feature

Ultimate privacy: All users stay anonymous during contact tracing, symptoms self-reporting, testing and statistics gathering. Users' sensible personal details is used only for the purpose of identification check during registration and delivering notification to confirm user's device.

Trustworthy Data: We have a smart-detection component to avoid the abuse of self-report function and any malicious act will be detected and denied immediately by the server. Our database is fragmented and different type of users have different authorization level to update databases. Updating important data like confirmed requires high level of authorization so that it could reflect important COVID-19 statistics in a reliable way.

Secure and reliable: We have set up different policy of firewall for different actions to find a balance between efficiency and security. Our contact trace system supports offline working and a smart tracing system analyze these data and put these information in a local database. Our successful rate of notification delivery is 99.95%. User could normally receive notifications within 10 mins, and not beyond 6 hours at extreme conditions.

Smart notification delivery: We have set priorities to deliver notifications so that user of higher risks are always notified at the first time. light client: Our designed app structure is tiny and easy to use. It could be installed and functioned on over 99% of smartphones in UK.

Customized setting: Users may customized the frequency of receiving notifications. Users could always check their status on mobile UI to get latest COVID-19 risk evaluation.
